

INDEX

- l-torsor
 - special, 80
- acl-generated, 87
- algebraic closure, 15
- atomic, 24
- ball, 73
- BS, 62
 - for ACVF, 102
- canonical base, 22
 - dcl, 36
- code
 - strong, 59
- conjugate, 27
- dcl-generated, 87
- definable, 15
- definable closure, 15
- divides, 20
- domination-equivalence, 18
- equivalence relation
 - finite, 21
 - opaque, 115
 - opaquely layered, 117
- forks, 20
- function
 - *-function, 37
- κ -generated, 62
- generic, 82
 - basis, 85
 - in value group, 82
 - resolution, 85
 - type, 82
- generically independent, 83
- geometric sorts, 74
- germ, 59
- good separated basis, 123
- group scheme, 119, 160
- Henselian, 71
- henselisation, 71
- i-complete, 143
- i-dominance, 146
- i-extension, 143
- imaginaries, 17
 - code for, 17
 - elimination of, 16
- immediate extension, 71
- independence
 - domination \downarrow^d , 30
 - generic, \downarrow^g , 83
 - J-independence, \downarrow^J , 161
 - modulus, \downarrow^m , 152
 - non-forking, \downarrow , 20
 - sequential, \downarrow^s , 88
 - stationary, \downarrow^s , 33
- indiscernible, 24, 32
 - in ACVF, 111
- internal, 26
 - to the residue field, 78
- invariant extension, 31
- invariant extensions
 - in ACVF, 89–92
- invariant type, 17
 - and generic independence, 83
 - and stable domination, 48
 - and stationary independence, 34
- J-independence, 161
- $\Lambda(s)$, 74
- lattice, 74
- maximally complete, 71, 123
- metastable, 51
- minimal, 24
- modulus independent, 152
- Morley sequence, 25
- Neumann’s Lemma, 53

- o-minimal, 14
- 1-module, 79
- 1-torsor, 79
- opaque
 - equivalence relation, 115
 - group, 117, 120
- opaquely layered, 116
- order-like, 84
- orthogonal
 - and stable domination, 107
 - to residue field, 127
 - to value group, 83, 103
- place, 70
- positive type, tp^+ , 151
- pre-resolution, 115
- preweight, 22
- prime, 24
- pseudo-convergent sequence, 71
- Puiseux series, 72
- radius of subtorsor, 79
- rank
 - Cantor–Bendixson, 16
 - Δ -rank, 19
- $\text{red}(T)$, 80
- residue field, 70
- resolution, 115
 - canonical open, 105
 - dcl, 118
 - generic closed, 104
 - prime, 115, 120
- resolved, 104
- saturated, 16
- sequential independence, 88
- S_n , 74
- St, 27
- stable
 - formula, 18
 - set, 25
 - theory, 18
- stable domination, 30
 - in ACVF, 93–99
 - over algebraic closure of base, 38
 - transitivity, 65
 - via a $*$ -function, 37
- stable, stably embedded, 26
- Stably dominated
 - for invariant types, 32
- stably embedded, 25
 - residue field, 73
 - value group, 73
- stationary independence, 33–37
- strong code, 59
 - on a definable type, 59
 - on a stably dominated type, 60
- strongly minimal, 23
- substructure, 77
- subtorsor, 79
- Swiss cheese, 81
 - block, 81
 - hole, 81
 - trivially nested, 81
- T_n , 74
- torsor, 79
 - subtorsor, 79
- totally transcendental, 23
- type
 - $*$ -type, 37
 - base for, 18
 - definable, 19
 - Δ -type, 19
 - extendible, 19
 - invariant, 17
 - isolated, 15
 - Lascar strong, 21
 - in ACVF, 95
 - stationary, 21, 100
 - strong, 21
 - unary, 79
- unary
 - code, 81
 - sequence, 80
 - set, 79
 - type, 79
- unary set
 - special, 80
- unary transfinite sequence, 88
- valuation
 - non-trivial, 69
- valuation ring, 69
- value group, 69
 - $\Gamma(C)$, 77
 - Γ_C , 77
- vi-complete, 143
- $\text{VS}_{k,C}$, 78
- weight, 22
