

# ASSIGNMENT 25

(page 1)

1. (A) NONE!

to prove that  $\sqrt{x+y} = \sqrt{x} + \sqrt{y}$  is incorrect, pick values: say,  $x=4, y=9$  then

$$\sqrt{x+y} = \sqrt{13} \quad \leftarrow \text{not equal!}$$

$$\sqrt{x} + \sqrt{y} = \sqrt{4} + \sqrt{9} = 5 \quad \leftarrow$$

in the same way we show that the remaining two formulas are wrong.

2.  $x-1 > 0$  and  $x+1 > 0$

so  $x > 1$  and  $x > -1 \dots$  thus  $x > 1$  (G)

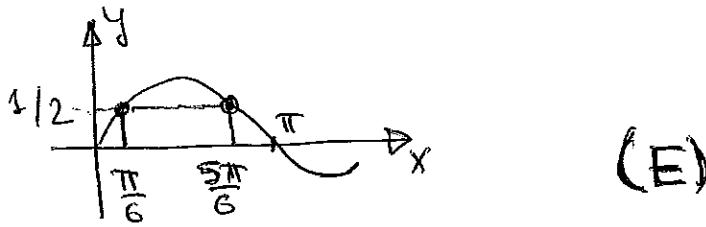

3. (I)  $= \frac{1}{x^4-1}$  not defined for  $x = \pm 1$

(III)  $= \sqrt{x^4-1}$  not def'd when  $x^4-1 < 0$ , i.e.  $x^4 < 1$   
 $(-1 < x < 1)$

(II) = def'd for all  $x$

answer = (C)

4.  $\csc x = 2 \rightarrow \sin x = \frac{1}{2}$ , so  $x = \frac{\pi}{6}$  and  $x = \pi - \frac{\pi}{6}$   
 $= \frac{5\pi}{6}$

(E)

5. (F) ... W is an increasing function... (I)

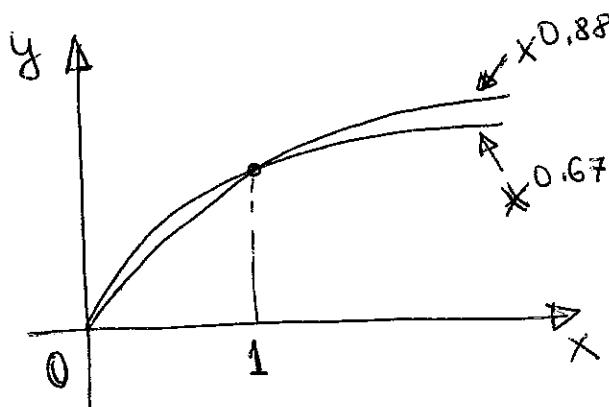

$W = \text{constant} \cdot M^{2/3} \dots$  (III)

6. TRUE ; period of  $\cos(ax)$  is  $2\pi/a$

7. TRUE ;  $T$  is inv. prop. to  $S \rightarrow T = C \cdot \frac{1}{S}$

then  $S = C \cdot \frac{1}{T}$  so  $S$  is inv. prop. to  $T$

8. FALSE ; look at graphs (so not true when  $0 < x < 1$ )

9. TRUE by def. of inverse function

10. FALSE ; it's enough to find one  $x$  for which  $e^{2x} = 2e^x$  does not work.

$$\text{take } x=0 \dots e^{2x} = e^0 = 1 \\ 2e^x = 2e^0 = 2$$

11. TRUE ; solve  $e^{2x} = 2e^x \mid : e^x$   
 $e^x = 2 \rightarrow x = \ln 2$

12. FALSE ;  $\arctan x$  is defined for all real numbers  $x$

13. FALSE ;  $\arcsin \pi$  is not defined since the domain of  $\arcsin$  is  $[-1, 1]$ ;  
as well,  $\arcsin$  is the inverse of  $\sin$  and not its reciprocal
